1. The department (Abteilung) for surface treatment is a subdivision of Hauptabteilung Optik of Zeiss, Jena. In the department, optical surfaces receive so-called T-Schutz (T-protection: T stands for transparent) through a steaming process.
2. T-Schutz is a mixture of mercury vapors with other unspecified ingredients; the exact composition is a Zeiss secret. The application of T-Schutz diminishes the reflection of optical surfaces, thereby increasing their light power by 30 percent.
